EXPERIENCE

Microsoft

Software Engineer II

Redmond, WA

September 2025 – today

- Shipped “*recurring tasks*” feature for Microsoft Planner supporting complex recurrence patterns, performant calendar rendering, and time zone handling for distributed teams
- Solo-engineered and drove adoption with 16 engineers for azstack; a cli and framework for creating and managing stacked pull requests in Azure DevOps, cutting median PR size by ~16% and lifting large code change completion rates **2.5x**
- Drove AI adoption across org, by incorporating PR-workflow agent skills and enforcement within harness hooks to prevent developer toil mid-PR, by cutting down MCP context bloat from 70k tokens to 10k, with no change to eval performance, by designing package/dependency-sharing system to cut down work-trees creation time by 90%, and hosting learning sessions.
- Built code-review agent pipeline with auto PR generation, allowing for testing and accepting agent-suggested code changes

Microsoft

Software Engineering Intern

Redmond, WA

August – November 2024

- Redesigned approval system for sensitive operations: migrated from stateless file-based tokens to database-backed records with audit logging, revocation, and granular access controls
- Built automated pipeline using AI code generation to detect, remove, test, and PR stale feature flags

Benchling

Software Engineering Intern

San Francisco, CA

May – August 2024

- Developed filtering feature for structured data tables used by 200K+ scientists for experimental data capture
- Redesigned selection model, clipboard operations, fill-down, search, and formula referencing across data layer and UI to support non-contiguous cell selections

Louisville Automation and Robotics Research Lab

Student Researcher

Louisville, KY

August – December 2023

- Developed and maintained Ros/Gazebo simulation environment for the ARNA medical bot research study on the efficacy of human-precise control of motor-powered carts for use in hospitals and nursing homes.

Google

Software Engineering Intern (STEP)

New York, NY

May – August 2023

- Designed and implemented Grading Periods and Excused State features for Google Classroom mobile app (150M+ users), achieving feature parity with web for mobile-only users

Johnson & Johnson

Technology Co-op

Raritan, NJ

June – December 2022

- Automated team newsletter generation, reducing manual effort by 4 hours per week, and developed tooling supporting clinical trial audit processes in R&D
- Built C# and Node.js (TypeScript) libraries for parsing and converting between JSON, DataTables, and HTML formats

The President’s Alliance on Higher Ed and Immigration

Summer Fellow

June – August 2022

- Initiated and developed <https://www.higheredimmigrationportal.org/undocumented-daca-students/data-tools/institutions/>

EDUCATION

University of Louisville | Cumulative GPA 3.77

Louisville, KY

Bachelor of Science in Computer Science

May 2025

- Management Leadership for Tomorrow Career Prep Fellow, Questbridge National College Match finalist, Kentucky Innovative Scholarship, [Eleven Scholarship](#)

TECHNICAL SKILLS

- Copilot SDK, TypeScript, React/Nextjs/Svelte, Java, Python, Dart, C#, Rust, SQL, Bash, C, C++, Swift, Flutter, dotNet

PROJECTS

UofL Course Search: <https://louie.davidteju.dev/>

Next.js, Express, TypeScript

- Built fast, flexible search to help students explore and discover courses based on whatever topics they want to learn

Claude Inspector: <https://github.com/DavidTeju/claude-inspector>

Docker, SveltKit, SupaBase, TypeScript

- Built agent loop allowing codex, copilot and claude code sessions to be continued with whatever harness of choice

HackMIT 2023: <https://betterletters.app/>

LLMs, OCR, Flask/Python, JavaScript

- Won HackMIT with web app to generate sample phrases with GPT, parse, score and give feedback to help master character writing in various languages
